

CMPT 165

Unit 2 - Markup

May 22nd, 2015

Today's Agenda

- Recap of materials covered
- Introduce a few useful tags and concepts
 - lists
 - anchor
 - image
 - attributes
 - absolute vs. relative URL
- Lab exercise

Good Webpage (Design)

CONTENT

- Messages to your audience

→ You provide. Check grammar 😊

INTERACTION

- Provide responses to audience

→ Web-programming (Python)

STRUCTURE

- Give meaning to each element
- “Meta” data (meta=about)

→ Markup, i.e. XHTML, HTML5

STYLE

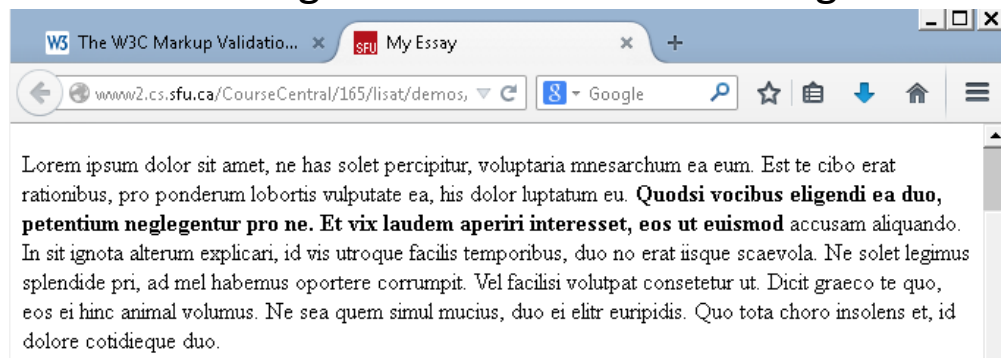

- Describe visual properties of each element

→ Cascading Style Sheets (CSS)

Why do markup?

1. Gives you more control over browsers
2. Encourages you to focus on content (no formatting yet)
3. Allows you to reuse code (we'll see why/how later)
4. Visual properties of webpages are not accessible to some people, e.g.:
 - Software like “[JAWS](#)” is used to read out webpages to the blind
 - Bolded text like this image is therefore not meaningful to the blind:

- Using e.g. `` tags:

`Quodsi vocibus eligendi...`

Makes your webpages more accessible, e.g.

“JAWS” will speak with a lower tone for contents of `` tags

High-level structure of a webpage

1. Document type declaration (DTD) ...more later
2. Header: provides “meta” information, i.e. things about the webpage
 - **Not displayed in browser window!**
 - **Title is displayed on the tab**
3. Body: Actual content

```
<!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Strict//EN"  
"http://www.w3.org/TR/xhtml1/DTD/xhtml1-strict.dtd">
```

```
<html>
```

```
<head>
```

```
<title>
```

```
Page Title
```

```
</title>
```

An element

```
</head>
```

```
<body>
```

```
<h1>
```

```
Page Heading
```

```
</h1>
```

An element

```
</body>
```

```
</html>
```

High-level structure of a webpage

AN ESSAY FOR CMPT 165

"Anyone who has never made a mistake has never tried anything new."-- Albert Einstein

1. INTRODUCTION

Lorem ipsum dolor sit amet, ne has solet percipitur, voluptaria mnesarchum ea eum. Est te cibo erat rationibus, pro ponderum lobortis vulputate ea, his dolor luptatum eu. Quodsi vocibus eligendi ea duo, petentium neglegentur pro ne. Et vix laudem aperiri interesset, eos ut euismod accusam aliquando. In sit ignota alterum explicari, id vis utroque facilis temporibus, duo no erat iisque scaevola. Ne solet legimus splendide pri, ad mel habemus oportere corrumpit. Vel facilisi volutpat consetetur ut. Dicit graeco te quo, eos ei hinc animal volumus. Ne sea quem simul mucius, duo ei elitur euripidis. Quo tota choro insolens et, id dolore cotidieque duo.

Vix legere legimus id, discere repudiare in vis, amet ridens efficiendi qui no. Aeterno constituam qui id, in dicit bonorum corrumpit eum. Qui id dicam periculis philosophia, id eos explicari quaerendum. Habeo consul ex per. Pri an agam assueverit.

2. METHODS

Vix ne elitur aliquam erroribus, pro id quando deleniti gloriatur. Quo albucius philosophia cu, per diam audiam tamquam an. No illum luptatum delicatissimi his. Utamur qualisque deseruisse pro ei, usu modo eros invidunt ex.

2.1 Xaf sd afdsafasd f

About “elements”

- Most elements consist of 1-2 components

`<h1>This is a heading</h1>`

– Opening (+ closing) tags + content

- Some elements do not have content:

– e.g. horizontal line (=rule), line breaks

– Use empty tags

`<hr/>`

`
`

e.g. `<p>This is a paragraph.</p>
`

`<p>This is another paragraph.</p>`

Important notes

- Tags must be in lower cases, e.g. <body>, ~~<BODY>~~
- Most tags should be closed:

```
<h1>This is a subheading
```

```
<p>Validator will complain.</p>
```

- Semantics should be respected:

```
<p><h2>Bad annotations</h2>Validator will complain.</p>
```

```
<h2>Good annotations</h2>
```

```
<p>Validator will <em>approve</em> it.</p>
```

- Ordering of tags matters!

- “Improper nesting”:

```
<p><i>Validator will <em>not</i></em> approve this.</p>
```

Another note

- White spaces are ignored:

```
<h2>This is a subheading</h2>
```

```
<h2>This      is a subheading</h2>
```

```
<h2>This  
      is a  
      subheading</h2>
```

...will be displayed in same manner

Basic tags

<h1>, ..., <h6>	<u>h</u> eadings	
<p>	<u>p</u> aragraph	*preferred over <i>
	<u>b</u> old	**preferred over
<i>	<u>i</u> talic	(as it gives semantic meaning of content)
<u>	<u>u</u> nderline	
	<u>e</u> mphasis*	
	<u>s</u> trong emphasis**	
<blockquote>	indented <u>q</u> uoting	
<q>	<u>q</u> uoting text (for citations)	
<pre>	<u>p</u> re-formatted text	
<tt>	<u>t</u> ypewriter <u>t</u> ype (“monospace”), not equivalent to <pre>	
 	line <u>b</u> reak	
<hr/>	<u>h</u> orizontal <u>r</u> ule (rule=line)	

Questions?

Unit 2 – Part 2

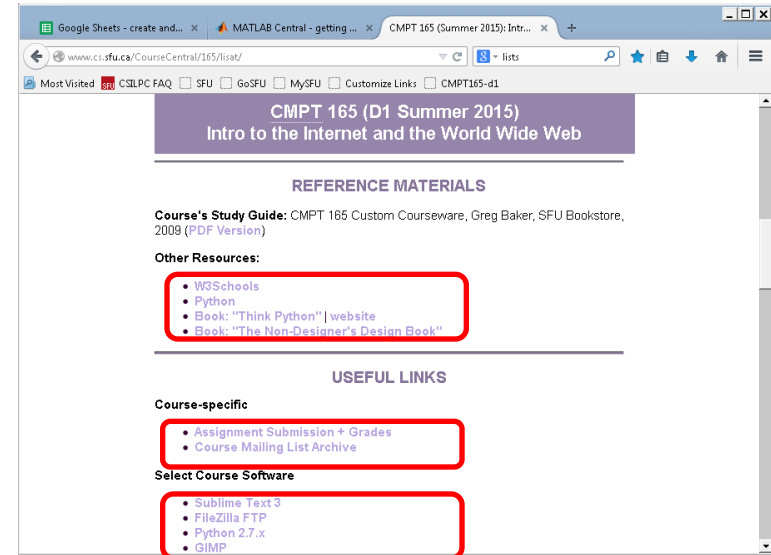

...More Tags

Lists

Display related items in an organized manner

Different uses of lists?

- Use the same way as in any document/report
- Summarizes keypoints (e.g. presentation)
- Create outlines for large webpages
- Describe steps in a procedure
- A set of definitions
- ...

Structure of list

- **Category 1**
 - **Subcategory 1**
 - **Item 1**
 - **Item 2**
 - **Subcategory 2**
 - **Item 1**
 - **Item 2**
- **Category 2**
 - **Subcategory 1**
 - **Item 1**
 - **Item 2**
 - **Item 3**
 - **Subcategory 2**
 - **Item 1**
 - **Item 2**

Ultimately, helps you organize items systematically,

e.g. subcategories within categories

“sub-lists” within lists

Types of lists

1. Category 1

a. Subcategory 1

i. Item 1

ii. Item 2

b. Subcategory 2

i. Item 1

ii. Item 2

2. Category 2

a. Subcategory 1

ii. Item 1

ii. Item 2

iii. Item 3

b. Subcategory 2

i. Item 1

ii. Item 2

ordered list

Types of lists

- Category 1

- Subcategory 1

- Item 1
- Item 2

- Subcategory 2

- Item 1
- Item 2

- Category 2

- Subcategory 1

- Item 1
- Item 2
- Item 3

- Subcategory 2

- Item 1
- Item 2

``

ordered list

``

unordered list

Types of lists

ABC

This term means abc.

BCD

This term means bcd.

DEF

This term means def.

EFG

This term means efg.

FGH

This term means fgh.

``

ordered list

``

unordered list

`<dl>`

definition list

Creating lists

Web browsers

- Safari
- FireFox
- Chrome
- IE
- Opera

Top 5 browsers (?)

1. FireFox
2. Chrome
3. IE
4. Safari
5. Opera

Demo

```
<h1>Web browsers</h1>
<ul>
<li>Safari</li>
<li>FireFox</li>
<li>Chrome</li>
<li>IE</li>
<li>Opera</li>
</ul>
```

```
<h1>Top 5 browsers (?)</h1>

<ol>
<li>FireFox</li>
<li>Chrome</li>
<li>IE</li>
<li>Safari</li>
<li>Opera</li>
</ol>
```

Q: ``?

Ans: list item

Creating Sub-lists

Common fruits in BC

- Apples
 - Granny smith
 - Golden delicious
- Oranges
 - Naval oranges
 - Mandarin oranges
- Bananas

Demo

```
<h1>Common fruits in BC</h1>
```

```
<ul>
```

```
<li>Apples</li>
```

```
<ul>
```

```
<li>Granny smith</li>
```

```
<li>Golden delicious</li>
```

```
</ul>
```

```
<li>Oranges</li>
```

```
<ul>
```

```
<li>Naval oranges</li>
```

```
<li>Mandarin oranges </li>
```

```
</ul>
```

```
<li>Bananas</li>
```

```
</ul>
```

Types of lists

1. Category 1

a. Subcategory 1

- i. Item 1
- ii. Item 2

b. Subcategory 2

- i. Item 1
- ii. Item 2

2. Category 2

a. Subcategory 1

- ii. Item 1
- ii. Item 2
- iii. Item 3

b. Subcategory 2

- i. Item 1
- ii. Item 2

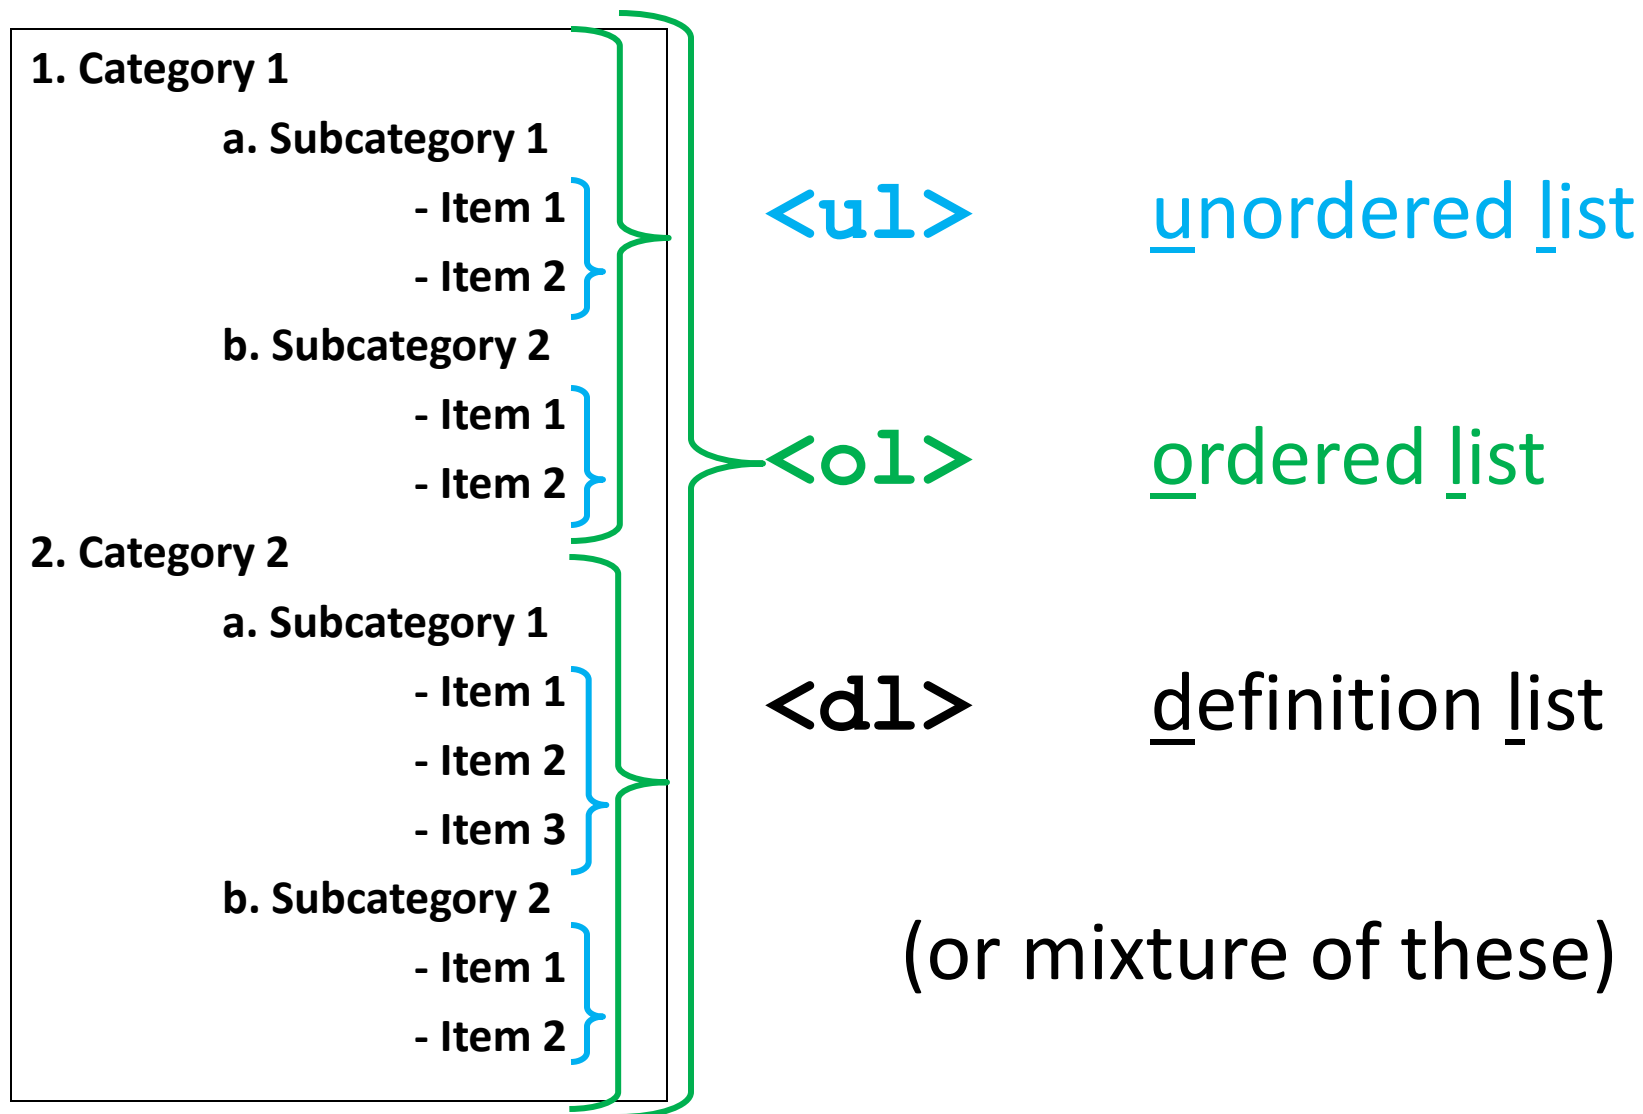

unordered list

ordered list

<dl>

Types of lists

Defining Lists

`<h1>Unordered list</h1>`

``

``

``

`<h1>Ordered list</h1>`

``

``

``

`<h1>Definition list</h1>`

`<dl>`

`<dt>Term</dt><dd>Description</dd>`

`</dl>`

`<dt>`: definition term

`<dd>`: definition description

Attributes

Provide variations to your elements

Examples:

- For lists:
 - Style of the list: bullet, arrow, square, disc, etc.

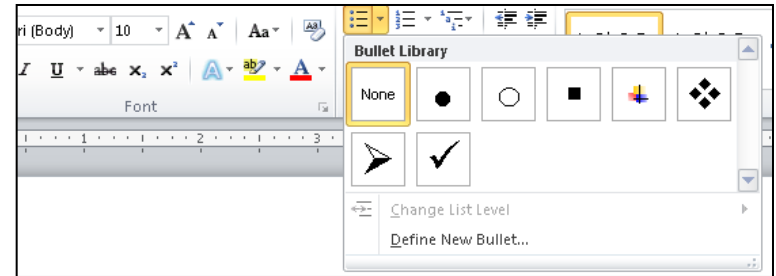

`<ul type="disc">`

- For ordered list:

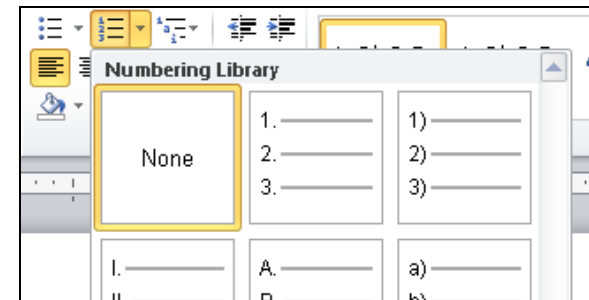

`<ol type="i">`

`<ol type="A" start="3">`

In Word Processor (MS Word)

In Word Processor (MS Word)

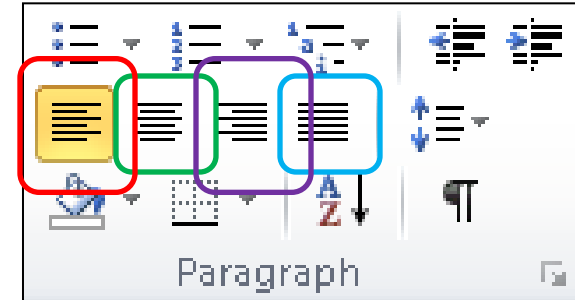

Attributes

More examples:

```
<p align="center">  
<p align="left">  
<p align="right">  
<p align="justify">
```

In Word Processor (MS Word)

```
<h1 align="center">  
<h1 align="left">  
<h1 align="right">  
<h1 align="justify">
```

Attribute specification

- Assign attributes to elements:

The diagram illustrates three HTML elements with their attributes highlighted by colored boxes:

- `<ul type="disc">`: The `type="disc"` attribute is enclosed in a green box, and the opening tag `<ul` is enclosed in a blue box.
- `<ol type="i">`: The `type="i"` attribute is enclosed in a green box, and the opening tag `<ol` is enclosed in a blue box.
- `<ol type="A" start="3">`: The `type="A"` attribute is enclosed in a green box, the `start="3"` attribute is enclosed in a green box, the opening tag `<ol` is enclosed in a blue box, and the value `3` is enclosed in a blue box.

name_of_attribute="value"

- Always close the value with double quotes ("value")!

Today's Agenda

- Recap of materials covered
- Introduce a few useful tags and concepts
 - lists
 - attributes
 - absolute vs. relative URL
 - image
 - anchor

URL (reviewed)

Universal resource locator: name of a resource

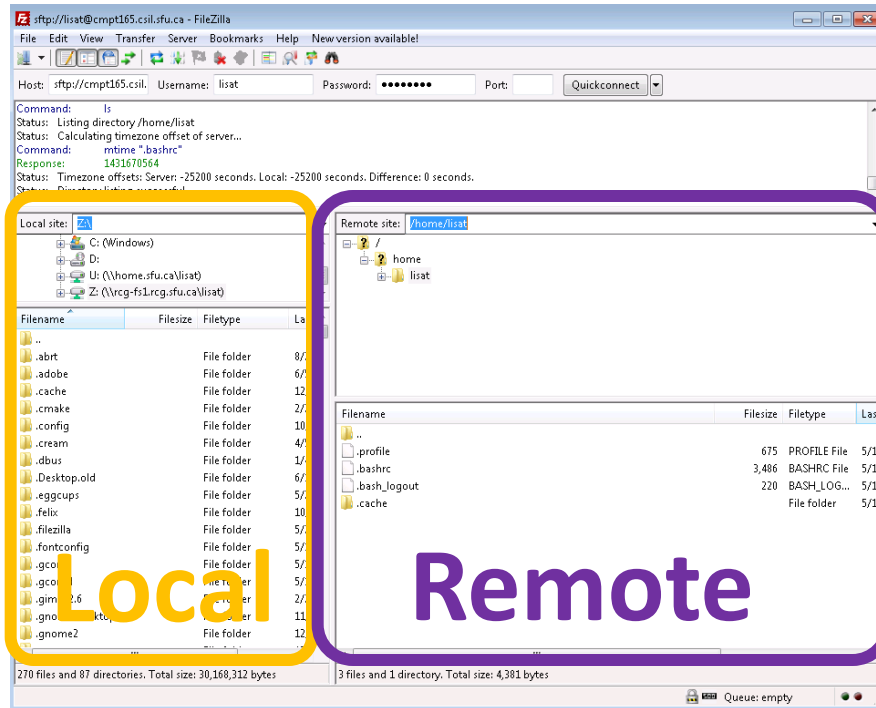

- html, pdf document, image file, etc.
- Examples:

<http://www.cs.sfu.ca/CourseCentral/165/lisat/index.html>

<http://www.cs.sfu.ca/CourseCentral/165/lisat/lectures/Unit1-Part2.pdf>

http://cmpt165.cs.sfu.ca/~lisat/demos/SFU_logo.png

FileZilla window

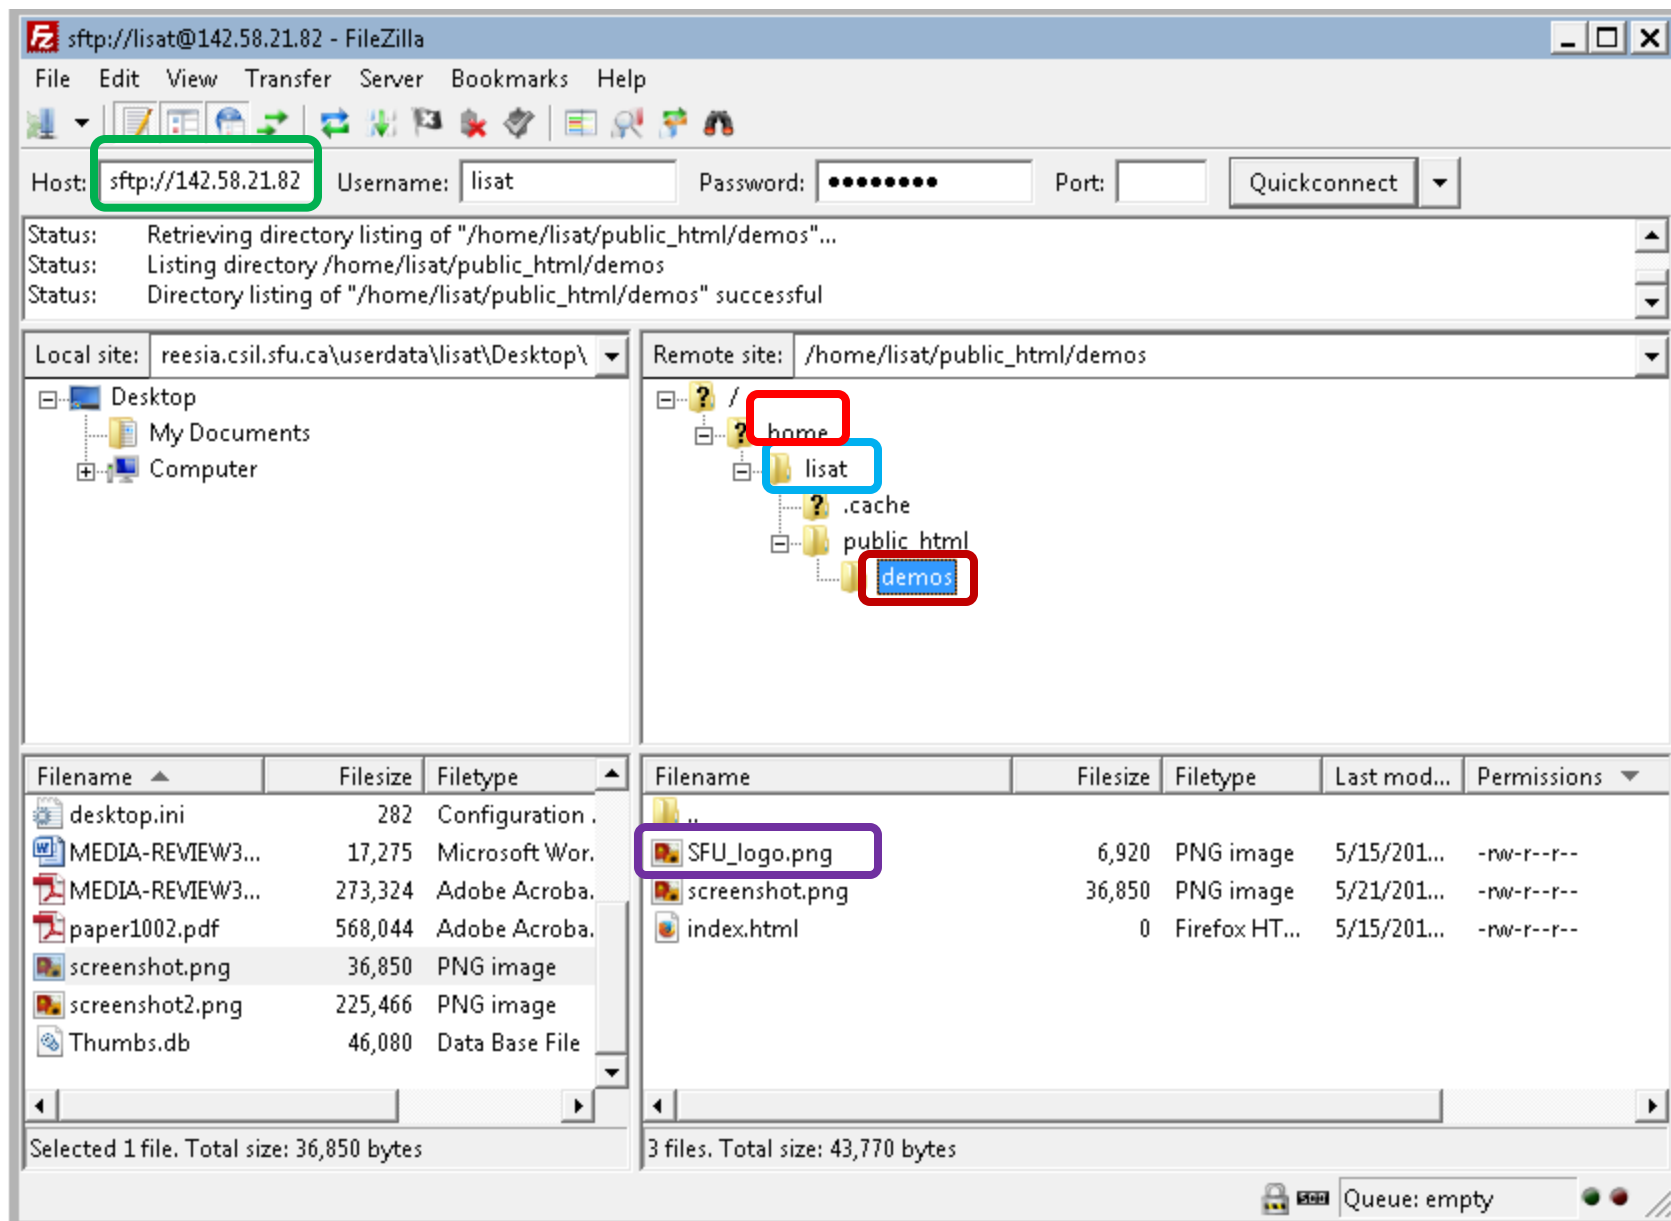

Demo

My station's IP: [199.60.5.178]

http://cmpt165.cs.sfu.ca/~lisat/demos/SFU_logo.png

 tag

- An empty tag (no closing tag)
 - Required attributes:
 - src**: where the image file is stored; abbreviation of “source”
 - alt**: alternative text to be displayed if file cannot be read
- Tip: be as descriptive as possible because search engines use them 😊

Example:

```

```

- Optional attributes:
 - height**: displayed height
 - width**: displayed width (% or pixels)

```

```

Absolute vs. relative URL

SFU_logo.png + Index.html both in same “demos” folder

→ use **relative** path (as opposed to **absolute** path)

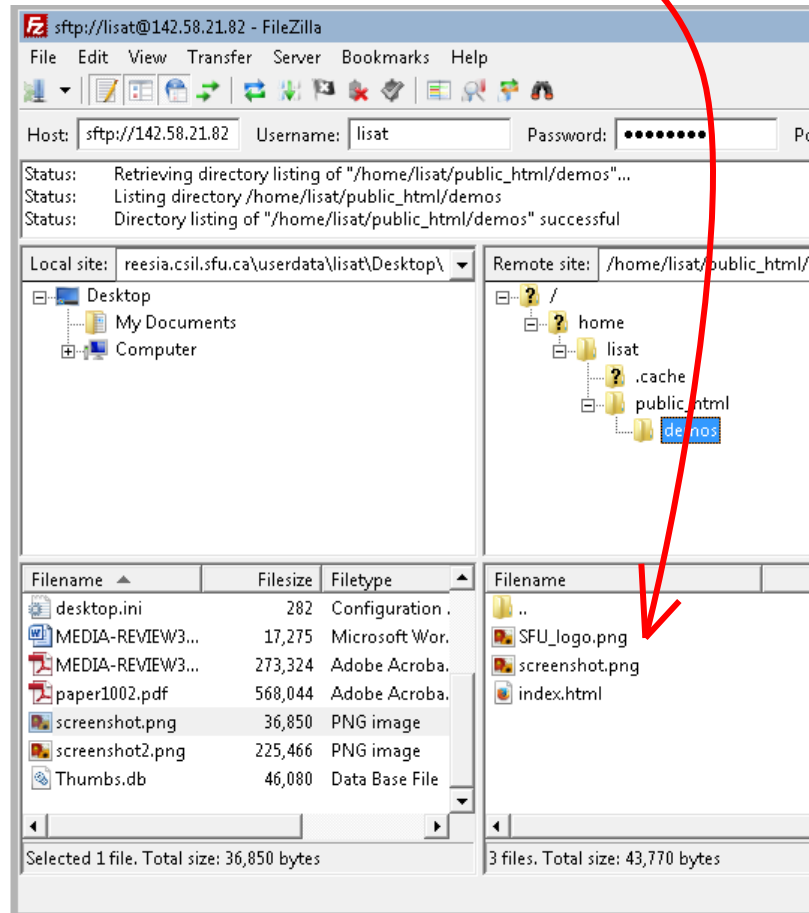

```
<!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Strict//EN"
"http://www.w3.org/TR/xhtml1/DTD/xhtml1-strict.dtd">
<html>
  <head><title>Title</title></head>

  <body>

    <h1>Heading</h1>
    <p>
      
      </p>

    <p></p>

  </body>
</html>
```

<a> tag

<a>: anchor tag creates a hyperlink to a resource

Example:

```
<p>click <a href="www.sfu.ca">here</a></p>
```

Required attributes:

href: hyper reference

Optional attributes

target : where the target page will be displayed

type: what type of resource **href** points to

Recap of the week

- Key components of good websites
- Structure of webpage: DTD vs. head vs. body
- Elements vs. tags vs. content
- Tags examined today:
 - List `<dl><dt><dd>`
 - Image ``
 - Anchor `<a>`
 - <http://www.w3schools.com/tags/>
- Key concepts:
 - Attributes
 - Relative vs. absolute URL

Lab exercise 2

- Has been posted
- XHTML + CSS
- 9 steps
 - Materials covered up till now: Steps #1-4
 - We'll look at CSS next class, so you can complete Steps # 5-9 later then
